

Introducing Instant Alert

Mobile Tornado's Push to Alert service allows you to protect field workers through a BB3G. Users can raise an alert instantly in the event of an incident.

The Push to Alert service is immediate, as it is always connected to an open data channel on the mobile network – giving users the fastest possible route to raising the alarm in the event of an incident. By using the global GSM mobile phone network the service provides almost unlimited coverage for users that have to cover large geographic areas.

Features

- Permanently connected to reduce alert notification times
- See the presence and availability of each user
- Push to Talk for assistance in the event of an incident
- Discreet feedback on any alert progress
- Used with Push to Locate to provide automatic location information
- A full and unique audit of the alert process

Technical Specification

Supported handsets:	BB3G Push to Talk handsets
Wireless technology:	GRPS, EDGE and 3G
Location technology:	GPS, A-GPS

Using the Push To Alert service allows you to protect field workers in line with UK Lone Worker Legislation.
