

Introducing Instant Locate

Mobile Tornado's Push to Locate is the latest addition to Mobile Tornado's Communications suite of services. With GPS-enabled Push to Talk handsets, you have the unique ability of being able to locate and communicate with your remote working staff in an instant.

Using Push to Talk and Push to Locate also helps protect your lone workers. By ensuring that a supervisor can remain in constant touch and knows exactly where they are, they can quickly send assistance if someone is injured or in danger – even if they cannot answer the phone.

Push to Locate also provides historical information of an employee's movement so that they can confirm, for example, if a delivery person was at the correct address at the correct time, or which route that the employee took.

Features

- Track staff locations via the Dispatcher
- Quickly monitor the location of individual users or the whole team
- Assisted GPS (A-GPS) will enable you to locate users quicker, utilising the Mobile and GPS network

Technical Specification

Supported handsets:	GPS-enabled Push to Talk handsets
Wireless technology:	GRPS, EDGE and 3G
Location technology:	GPS, A-GPS
Location updates frequency:	Every 10 minutes by default

Protect your lone workers in dangerous environments while improving workforce coordination.
