

# Introducing InstantTalk

**Mobile Tornado's Push to Talk service allows your field workers to keep in constant touch with the office as well as each other. By using mobile phones instead of 2-way radios, Push to Talk also allows you to better manage equipment costs as staff need only carry one device.**

Communicating with Push to Talk is instantaneous because there is always an open voice channel and there is no need to dial a number. To make a call you just push a button and talk; this could be one to one or to a group. Push to Talk has the advantage of almost unlimited coverage as it uses the global GSM mobile phone network and as it utilises the data channel you will still be able to make calls when the voice channel is congested.

## Features

- Broadcast to all members of a group with a single push
- Talk privately on a one-to-one basis
- Hold instant conference calls
- See the presence and availability of each user
- Create your own user groups
- Do not disturb option
- Windows Dispatcher allows office staff to communicate with field workers

## Technical Specification

Supported handsets: Push To Talk compatible range of handsets
