

# Instant Talk

Mobile Tornado's Instant Communications takes your mobile workforce to the next level by offering a low cost mobile data-based Push To Talk solution that can be installed on existing management devices.

**Combining Voice Communication with Management** – instead of having two devices, a PDA for data management, and a mobile phone, Mobile Tornado offers the opportunity to combine the two with its software-based platform-independent PTX Client, enhancing productivity while lowering terminal equipment costs. The software-client can be installed and integrated on Windows Mobile, Symbian and other ruggedized devices.

**Group Communication and PC-based Central Dispatch** – Mobile Tornado turns a mobile phone in a mobile force. It's the perfect team management tool, getting the message out to everyone at once. With unique PC-based central dispatch software the dispatch can communicate with any member or group of members while viewing their availability.

**Hosted Service with no Upfront Costs** – Implementing Instant Communications in your organization is easy. As a fully hosted solution, it doesn't require any set-up or hardware installation. All you have to do is simply contact Mobile Tornado's Certified Reseller and your mobile workforce will be able to add the Instant Communications capabilities to their existing handsets. The hosted solution features are fully branded self-service web-based interface where organizations can manage their accounts.

## Taking Push To Talk to a Whole New Level

Mobile Tornado's Instant Communications solution take PTT to the next level. It offers IM-like presence list with which mobile workers can instantly call any member of the list or make instant group calls with just the push of a button. A unique PC-based dispatch can communicate with any member (one-to-one) or groups while viewing their availability.

### How can I set-up the service?

Regardless of the mobile carrier, PTT service can be set-up within minutes following sign-up. PTT conversations can work across carriers, networks, national borders and various handsets.

### Are there any upfront costs?

As a fully hosted solution, it does not require any set-up or hardware installation. Simply contact Mobile Tornado's Certified Reseller and your mobile workforce will be able to add Instant Communications to its existing handsets. The hosted solution features a fully branded self-service web-based interface, where organizations can manage their accounts.

### Why Mobile Tornado?

Mobile Tornado Group (AIM: MBT) specialises in the provision of Instant Communications applications for mobile devices, with a focus on enterprise workforce management. The company's three main applications are Push to Talk, Push to Locate and Push to Alert, enabling organisations to communicate with their employees more effectively and cost efficiently than conventional mobile services and competing private mobile radio solutions. By equipping their workforce with conventional mobile handsets and MBT applications, a company can communicate with one or many employees simultaneously, track employee locations, and immediately be alerted of major issues.

MBT's patented Internet Protocol Radio Service (IPRS) technology has been successfully deployed in networks around the world. The suite of IP-based, OMA standards-compliant, services provide real time, 'always-on', bandwidth-efficient communications across a range of mobile networks and devices, including compatibility with forthcoming LTE (Long Term Evolution) 4G mobile networks. Its technical and cost performance is superior to many competing services and technologies, as is being validated in the marketplace

Mobile Tornado has offices in the U.S, Germany, Israel, India and China.
