Contract Win

Released : 28/06/2006

Mobile Tornado Group PLC
28 June 2006

Mobile Tornado Group plc
('Mobile Tornado' or 'the Company')

Indonesian Contract Win

Mobile Tornado Group plc the instant mobile messaging service provider specialising in Push-To-Talk services ('PTT') today announces its first order from Indonesia. The order, for 30,000 Mobile phone user licences and 85,000 PC user licences, has been placed by Elektrindo Nusantara..

Elektrindo Nusantara provides telecommunications services throughout the Indonesian islands and has reached an agreement with Mobile-8, an Indonesian mobile operator, to start offering PTT services to clients across the region.

Under the terms of its deal with Elektrindo Nusantara, Mobile Tornado is responsible for supplying software licences to its patented IPRS Push-to-Talk technology platform, as well as procuring the associated third party hardware and software with which IPRS works. Mobile Tornado will also provide professional services to help install and configure the system in Indonesia. The service is due to be launched in Autumn 2006.

Temi Efendi, of Elektrindo Nusantara said:

'Mobile Tornado's solution is a cost-effective way of providing Radio Trunking style communications across the Indonesian islands, yet it delivers much wider range of advanced functionalities. It also supports PC users as well as Mobile Phone users on the go. The number of islands and the distances involved makes building traditional radio-based services uneconomic- by using existing mobile networks, we are enabling many mobile voice and data applications for the public and organisations in Indonesia . It will become a new style of chatting and communication between Indonesian people'

John Swingewood, Chairman of Mobile Tornado, said:

'We are delighted to be working with Elektrindo Nusantara on this project, our proven IPRS technology is network independent and works on GSM/GPRS, CDMA and WiFi networks and we inter-work with the widest range of existing handsets - this contract is a good illustration of the additional functionality and revenues we can bring to operators of existing mobile networks.'
