('Mobile Tornado')

Revol Wireless Selects Mobile Tornado's Push-To-Talk Platform

Offers customer presence-based messaging including text messages and pictures

Mobile Tornado, one of the leading providers of convergent, presence-based instant communications, today announced that its Instant Communications platform has been selected by Revol Wireless to be made available to its customers. By integrating Mobile Tornado's breakthrough technology platform, Revol can offer users Push-To-Talk (PTT) on its CDMA network. This enables Revol to meet the needs of customers who demand instant PTT style communications bundled with the strong Unlimited Anytime Minute option.

Through Mobile Tornado's solution, Revol is able to provide many of its customers with an intuitive PTT option directly to their existing handsets. This allows these customers to add PTT without any additional investment in equipment.

'Mobile Tornado offers an intuitive solution that requires minimal network resources and maximizes our customers' value,' said Rocky Crossland, President and CEO of Revol Wireless. 'We evaluated several PTT solutions, and Mobile Tornado was selected because of the ease of deployment and the opportunity for use on existing handsets. Mobile Tornado enables us to give our users cutting edge services to enhance their mobile experience, and gives us a tremendous competitive advantage.'

Revol offers an alternative to traditional wireless service by offering plans with unlimited calling that don't require credit approval. Revol's simple, affordable approach to mobile phone service enhances today's mobile lifestyle by offering its customers a high-quality, all-digital wireless network for a flat-rate.

'Revol and Mobile Tornado both offer products that go beyond the existing offerings in the market,' said David Parry Vice President of Worldwide Sales at Mobile Tornado. 'Revol offers a unique approach to wireless that is not limited by the usual service provider business, and we are happy to be a part of the revolution in mobile communications.'

About Mobile Tornado

Mobile Tornado extends 'push-to-talk' technology beyond just voice. With its patented IP-based 'IPRS' platform, service providers can provide users with unique presence based push-to-talk along with many other revenue generating services such as: presence-based Instant Messaging; text messaging; pictures; real-time streaming video or any other data content. All of which are interoperable between any enabled mobile device, fixed handset or desktop PC, and on any network infrastructure.

Leading mobile operators and enterprises worldwide currently use Mobile Tornado solutions through infrastructure vendors such as Nortel, alongside key channel and managed services partners in the Americas, EMEA and Asia Pacific.
